Off-Line

The SC Midlands Chapter of the Information Systems Audit & Control Association

May Seminar:
Database Security, Compliance & Auditing Best Practices

Best Practices in Managing Data-Related Risks

Compliance requirements and an ever increasing number of security threats targeting database applications are causing companies to investigate ways to audit database activity. "Who has access, what did they do, when did they do it?" are just some of the questions that we need to have answers to in today's regulatory environment.

This is an informative session that will cover the following topics:

- Factors driving database auditing requirements
- Access and Authentication Auditing
- Privileged and non-privileged user auditing
- Vulnerability and suspicious activity auditing
- Change auditing
- How does database auditing compliment your existing layered defense strategy

The collection, analysis, and use of audit-related data have never been more important to corporate America than they are today. Join us for a discussion of the tools, techniques, and methodologies that are being used to help companies create unimpeachable audit trails for its key systems and sensitive data.

Protiviti

Protiviti is a leading international provider of independent internal audit and business and technology risk consulting services. Protiviti helps companies worldwide identify, measure, and manage operational and technology-related risks they face within their industries and throughout their systems and processes. The firm also offers a full spectrum of internal audit services, technologies, and skills for business risk management and the continual transformation of internal audit functions.

Application Security Inc.

AppSecInc is the leading global provider of database security solutions for the enterprise with offices in North America and the UK, and a robust partner-reseller network in key markets like EMEA, Asia-Pacific, and Latin America. AppSecInc's products – the industry's only complete vulnerability management solution for the database tier – proactively secure database applications at more than 700 organizations around the world. Our security experts, combined with our strong support team, deliver up-to-date database protection that minimizes risk and eliminates its impact on business. To learn more, visit www.appsecinc.com.

Summer Make-Up Session

What happened to our ISACA meeting in March? Do we still have a Chapter? Are we going to have any more meetings before summer? Just what is going on with the price of gas anyway? Well, we can't help with the last question, but yes, we still have a Chapter and we're still planning meetings! As for the March meeting – thanks for your patience - sometimes the best made plans just don't work out. In an effort to make amends, we're planning a summer make-up seminar in late July. Expect a meeting announcement by mid-June!
